

Comparison Chart & Product Selection Guide

Disposable Underpads

Disposable underpads comprises of a sandwich of three major layers:-

- Top layer is an absorbent non woven fabric,
- Bottom layer is a polyethylene film,
- Middle layer contains fluff made from wood pulp and particles of Super Absorbent Polymers (SAP). Super Absorbent Polymers can absorb and retain extremely large amounts of a liquid relative to their own mass. It converts liquid into a gel and removes odor from urine. However it does not absorb stool / fecal solid particles.

The Below chart will help you to understand the disposable underpads offered by Kosmochem and choose the product best suitable to your needs.
